KEY FEATURES	
<ul style="list-style-type: none"> • Measures monocular or binocular refractions • Portable, lightweight, and Wi-Fi enabled • Quick and noninvasive 	

Spot Vision Screening (powered by PediaVision) is a handheld binocular autorefractor. The portable, lightweight, and Wi-Fi-enabled device measures monocular or binocular refractions, eye alignment, and pupillary distance and size in a noninvasive fashion on patients as young as 6 months of age. The device's patent-pending technology reportedly makes these procedures as simple as using a camera by providing a comprehensive, objective analysis in just seconds. A 1-page summary can be printed, providing more details for follow-up care.

AKR 700 Auto-Kerato-Refractometer

PRICE	N/A
COMPANY	Stereo Optical
