

# REVENUE CYCLE SUCCESS

Are you leaving money on the table?

BY FIELDING EMMOTT

Efficiency and predictability should be the aim of the revenue cycle management (RCM) team at ophthalmic ambulatory surgery centers and practices. Neglecting front-end RCM processes can cost a practice big money on the back end. Addressing inefficiencies in the RCM department is an obvious strategy, but maintaining a level of predictability requires a more nuanced approach to revenue cycles.

Not only can efficient, predictable RCM improve the financial health of a practice, but it can also strengthen a practice's ability to provide excellent patient care by giving staff more time to focus on seeing and treating patients. As CMS and private insurers continue to adjust their complex reimbursement rules and regulations, the administrative and billing staffs are constantly challenged to keep up. From provider credentialing and patient scheduling to payments and accounts receivable, the staff is often under pressure to maintain efficient, optimized RCM processes.

To combat fraud and waste, federal agencies have introduced integrity initiatives such as the Recovery Audit Program that are designed to identify incorrect Medicare payments and collect overpayments. These initiatives bring further scrutiny to submitted claims, resulting in a 9% increase in Medicare Part B claim denials.<sup>1</sup>

The adaptability of a practice's RCM processes to this ever-changing landscape can directly affect how much time and revenue are wasted.

Questions practice owners should ask themselves include the following:

- Which billing processes can be automated?

## MEET THE PRACTICE MANAGEMENT SECTION EDITORS

In 2022, *CRST* is expanding its practice management content with the help of three section editors: Jill Maher, MA, COE; William B. Rabourn Jr; and Chase Rabourn. These consultants have more than 50 years of experience in the health care industry between them, and they will guide the selection of practice management topics and contributors for each issue.

**Jill Maher, MA, COE**

- Principal Consultant and Recruiter, Maher Medical Consulting
- Works with physicians and administrators in ophthalmic practices to provide overall practice management support and strategic planning
- Has more than 25 years of experience in the health care industry, including more than 22 years with Allergan, Johnson & Johnson, and Wyeth
- Expertise:
  - Strategic planning
  - Financial analysis
  - Physician and administrator recruiting
  - Marketing
  - Leadership and sales training
  - Team building
  - Business development
  - Practice efficiency

**Chase Rabourn**

- Digital Marketing Manager, Medical Consulting Group
- Manages digital marketing strategies and enhances search engine optimization for ophthalmology clinics with a fresh perspective
- Expertise:
  - Digital and social media marketing strategy
  - Search engine optimization via social media account development, Google AdWords, and print advertising

**William B. Rabourn, Jr**

- Founder and Managing Principal, Medical Consulting Group
- Provides consulting and creative services to medical and surgical ophthalmology and plastic surgery practices across the United States
- Has nearly 25 years of comprehensive experience in business strategy
- Expertise:
  - Ophthalmic business strategy
  - Ophthalmic marketing
  - Mergers
  - Business operations
  - Integrating innovative surgical products into practices
  - Practice development

- Does the billing staff have enough time and resources to complete their tasks efficiently?
- Are the practice's systems protected from cyber attacks?

### AUTOMATION AND EFFICIENCY

A growing need for optimal organizational workflow coupled with regulatory reforms and reclassifications is driving growth in the multibillion-dollar US RCM market—11% year-over-year in the next 5 to 7 years.<sup>2</sup> Instability created by the COVID-19 pandemic, including staffing shortages and claim fluctuations, has caused many practices to consider outsourcing their RCM.

Accelerating competition in this space is spurring the development of third-party RCM solutions from businesses aiming to capitalize on the growing market. The evolving intricacies of a practice and its staff and patients necessitate a customized solution. The right solution will increase revenue, decrease the number of technical errors, and streamline engagement between staff and patients.

Transitioning from manual to electronic claims transactions can save a significant amount of time and money. According to the Council for Affordable Quality Healthcare, electronic prior authorization offers providers the greatest time savings potential by

reducing transaction time from 20 to 6 minutes and cost from \$7.50 to \$1.89.<sup>3</sup>

### CYBERSECURITY AND THE UNKNOWN

Suppose that RCM efficiency optimization begins to pay off but that, one morning, all of the practice's systems have been encrypted. What is the next step? How long a shutdown is economically feasible? A practice's revenue is 100% dependent on its systems being fully operational.

Automating internal billing processes can save a practice critical time and money. Transitioning to electronic transactions, however, does not come without risk. The more a practice sends and stores patient data electronically, the more valuable its systems become to bad actors and malicious parties.

So, what is the risk? According to data from the Ponemon Institute, health care organizations had the highest costs associated with a data breach—\$175 per compromised record—for the 10th year in a row.<sup>4</sup> This figure represents only the initial cost associated with stolen health records. It does not consider the additional time and resources spent investigating and resolving an issue that can be devastating to patient care and safety. The average time for an organization to move from a cyber attack to containment to completed forensic investigation is 49 days.<sup>5</sup> The \$175 in damages therefore likely

represents just the tip of the iceberg for an impacted practice. To secure and protect their sensitive data, health care organizations increasingly rely on the expertise of data loss prevention services.

The National Institute of Standards and Technology offers a cybersecurity framework that businesses and organizations of all sizes can implement to improve their cybersecurity posture. Relatively easy measures such as implementing two-factor authentication and training staff to detect suspicious emails are a start. The more proactive an organization is in protecting its networks and data, the more predictable its operational revenue will be. ■
